

ATT-TAMS Software

EMPLOYEE DETAILS

The software allows you to store all your employee information in one central database. The software also can store the employee fingerprint algorithm. So this can be transferred to new terminals as they are added to the system without having to enroll the employee again.

COMMUNICATION

The ATT-TAMS software allows for multiple clocks to be connected to any one host machine when using TCP/IP. The software also supports USB and USB memory stick. You can even have a mixture of all three making the connection to the host software very flexible.

SUPPORT

Lifetime email and telephone support on all products. Software upgrades and remote assistance software as required.

ATT-TAMS Complete Time and Attendance Software.

- Windows ME/XP/Vista compatible software.
- Works online or off line operation. Export facility to excel, CSV, HTML etc.
- Data stored in an access database. Backup and restore facilities.
- Access control module built into the software as standard.

ATT-TAMS Software is supplied with all of our clocking systems free of charge. The software has been developed over a number of years to include some really useful features to help administer your time and attendance requirements. Unlike some other software packages there is no employee number restriction to the software or how many clocks you can have connected to the host machine. This software enables the user to enter the employee information into a central database and share the information across a number of clocks if connected via the USB or LAN. ATT-TAMS allows for report generating and the facility to export the information into different formats (excel, csv, html) All information is stored in an access database that can be backed up by the software. The typical reports that can be generated are daily attendance, weekly attendance, lateness each report can be generated for each employee individually or as a group. Departments can be setup to help in grouping people together or you can have everybody in one group. The software is easy to use and very flexible to meet all your time and attendance requirements.

Features

TCP/IP, USB Connection for each clock.

No employee limit.

Multiple shift patterns

Access control Module

Database backup facility

Online/Offline mode

Create your own report with a built in report designer

Display employee photos

Setup access rights for different users of the software
